Repository Structure

This repository contains two main files:

- **README.md**
Provides a clear overview of the full modeling workflow, including data preprocessing, feature engineering, model selection, hyperparameter tuning, and ensembling strategy.
- **midterm.ipynb**
Contains the full implementation of the project, including all steps for data processing, model training, hyperparameter tuning, evaluation, and final prediction generation.

The README is intended for a high-level understanding of the approach, while the code file provides full reproducibility of the results.
